Objective

Seeking to immerse in the day-to-day operations of information security and cybersecurity teams at major organizations to gain practical, real-world experience in proactive prevention, detection and rapid response to cybersecurity events. Eager to contribute a diverse background in penetration testing, networking, and exposure in leveraging AI/ML for business applications modernization initiatives and add value to organizations' goals. Particular interest in pursuing a SOC analyst and Incident response opportunities and continuously expanding my expertise in cybersecurity

Education & Certifications

Western Michigan University, Kalamazoo

B.S. in Cybersecurity - Minor in Data Science

Kalamazoo, MI

Graduated May 2026

Post Graduate Program Certificate in AI & Machine Learning: Business Applications

The University of Texas at Austin - McCombs School of Business

May 2025 - January 2026

- Developed practical exposure in AI powered business application transformation projects
- Gained particular experience in eight industry-relevant projects, including applications like sentiment analysis in finance, AI-powered medical assistants, and legal document summarization
- Strengthened my knowledge in Python, data preprocessing, model training and deployment

ISC2 Certifications

Certified in Cybersecurity (CC)

June 2025 - May 2028

CompTIA Certifications

Network+

March 2026 - May 2029

Security+

May 2026 - May 2029

Work Experience

Lee Honors College Western Michigan University

Peer Student Success Team Assistant Coordinator & Mentor

Kalamazoo, MI

August 2023 – Present

- Facilitated academic and social support by guiding new honors students through mentorship and peer support
- Organized academic, volunteer, and community events to enhance student engagement, leveraging leadership and event planning skills to create peer connections

College of Engineering Western Michigan University

Research Assistant

Kalamazoo, MI

May 2023 – August 2023

- Conducted in-depth research on Goal Structuring Notations in autonomous vehicles, applying analytical skills to support advancements in system safety and reliability
- Collected and analyzed large datasets and designed experiments to support autonomous system safety research, ensuring integrity and accuracy while documenting and improving outcomes

Projects & Relevant Coursework

Periodic Access Review System (Senior Design Project)

Developed a full-stack access review system automating roster comparison, exception tracking, and compliance validation to enforce least-privilege access controls

Network & Vulnerability Scanner

Developed a Scapy-based vulnerability scanner performing ICMP, TCP, and ARP scans with CVE and SSL/TLS analysis

OWASP Juice Shop Pen-Testing

Performed penetration testing on OWASP Juice Shop, identifying vulnerabilities like XSS, SQL injection, and authentication flaws

Password Manager

Developed an offline desktop password manager in Python with AES-256 encryption, TOTP MFA, password strength analysis, reuse detection, and age-based alerts

Skills

Skills: Python, Java, JavaScript, C, Bash, SQL (MySQL), HTML, CSS, R

Security Tools: Nmap, Wireshark, OWASP ZAP, Burp Suite, Snort, Metasploit

Tools & Platforms: Linux (Ubuntu, Fedora, Kali), Windows, Docker, Kubernetes, GitHub, Agile, Django
